

Seal Options

Packing options:

The Buna seals are used for non corrosive chemicals and come standard with all pumps that use vee packing for seals.

The Inject-O-Meter special packing seals are used for semi corrosive chemicals and are recommended for pumps that will handle semi- corrosive chemicals .

The Teflon(r) and Viton(r) seals are used for corrosive chemicals and are recommended for pumps that are needed to handle corrosive chemicals.

O-ring options:

Inject-O-Meter offers many different o-ring options for your metering pump needs. All pumps come standard with Viton(tm) o-rings., however we offer EPR, Aegis, and Kalrez(tm) for your chemical injection needs. Below is simple guide for o-ring compatibility for chemicals:

Viton(r): good (will handle most chemicals) EPR: good (will handle most chemicals) Aegis: Very good (will handle most highly corrosive chemicals)

Kalrez(r):

Excellent (recommended for highly corrosive chemicals)

For technical information on any of these o-rings please contact the factory.
